

## BUGREPORTS AND LOG OUTPUTS

If you have an application crash, you need bugreport. You can find and send us the "\_bugreports/\_BugReport.zip" for related scene from "Preferences" directory. Add some information about how to reproduce the issues. See next picture how to find it.

Also activate some(or all log options) to watch the processes. Plugin will write a log text file from operations. And find and send us this log output file which is named as "c4doctanelog.txt". See next picture.

Check render statistics from CONSOLE outputs.
